The Challenges

A recent study of the manufacturing segment states that 63% of manufacturing organizations exceed their ERP budgets and their overheads tend to be higher than the average among all industries. This is due to the complex nature of manufacturing ERP systems which require customizations and integrations.

The Solution

Microtek managed their multiple merger and demerger activities within their generation and distribution companies for their more than 30 enterprise systems including SAP, Oracle and PeopleSoft. Application support for their systems was offered for more than 6 years. Microtek integrated 30+ systems and over 70 reports, enabling more than 10 subject areas (e.g., inventory, purchase orders or receipts) with very few resources saving sizeable cost. We also helped the client implement Reporting and Analytics tools and designed Sarbanes and Oxley (SOX) reporting system for this company

Microtek helped the client to upgrade Oracle Applications from 10.7 to 11i. The various modules included supply chain, Financials, inventory, plant operations, meter readings, billing system and order to cash.

About Microtek Systems
